APPLICATIONS

Final Transmissions

Technologies used: Node.js, JavaScript, mySQL, WebRTC, HTML5, CSS3, A-Frame

- Implemented Express.js routing and authentication for location based storytelling application
- Designed proximity based sound to facilitate an immersive experience
- UI design for the main interactive elements of the story experience
- MySQL query and database design
- AWS EC2 Deployment

Inky

Technologies used: Python, JavaScript, HTML5, CSS3, Bottle (micro-framework)

- Python implementation of a wiki engine, including CRUD operations
- Created custom markup language for user data entry as a way to cleanly scrub user entered HTML and JavaScript while allowing for creative expression and display
- Built using Python Bottle micro-framework in an MVC pattern

Scientific Calculator

Technologies used: JavaScript, jQuery, CSS3, OOP, HTML

- Built scientific calculator to support proper order of operation and provide graphical user interface
- Used CSS animations for natural look and feel of user guide and advanced operation panels
- Included multi item history recall for both calculations and answers that allows for the selected item to be placed back into the current calculation
- The calculator has built in support for commonly used mathematical functions
